

AGORA Prior Weight Sensitivity — Hamilton gLV (L1+L2+L3)

Dieckow 2024 |

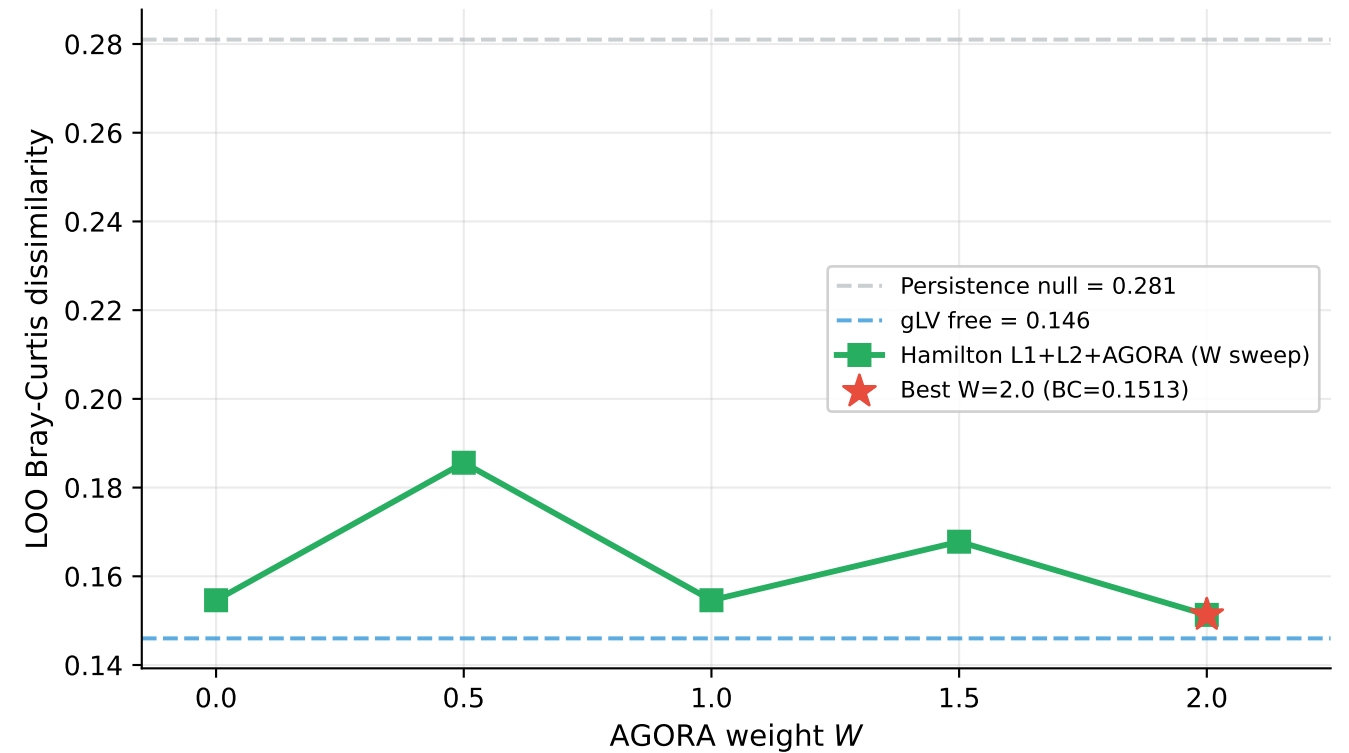

W scales the AGORA2 pFBA cross-feeding/competition signal |

LOO-CV $n=10$ patients

A AGORA weight sensitivity — LOO-RMSE
(lower is better; dashed = baselines)

B AGORA weight sensitivity — Bray-Curtis
(lower is better)

C Per-patient LOO-RMSE deviation from patient mean (green = below-average error, red = above-average)
