

Connecting gLV mathematical model with experimental data:
A gLV vector field in (Bacilli + Bacteroidia) plane
 (trajectories from Szafranski CT I/II/III/IV initial compositions;
 ○=start, ★=end t=40d; □=Dieckow CT1, ◇=CT2; Joshi ▲=health ▽=peri)

B CT diagnosis composition (Szafranski Fig. 3b)

C Empirical effective growth rate (MTX/16S) vs gLV prediction $\mu_i = b_i + \sum A_{ij} \phi_j$
 (solid = Joshi experimental; hatch = gLV model at Dieckow CT1/CT2 composition)

D MDI proxy along gLV trajectories from Szafranski CT initial conditions
